DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows: FLINT analogs having specific amino acid changes in the protein of SEQ ID NO: 1. Given the immense number of possible species, examples of three species are given below.

For example, one FLINT analog would be with Arg at position 218 replaced by Gln.

Another FLINT analog would be with Arg at position 218 replaced by Ser.

Another FLINT analog would be with Thr at position 216 replaced by Pro, and Arg at position 218 replaced by Gln.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 1646

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

No claim is generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: although the Flint analogs all require a change in amino acid position 218 relative to the prior art protein to make them resistant to proteolysis, depending upon what that amino acid change is, the resulting proteins have different biological activities (see page 61). Also, additional changes at the other amino acids confer different biological activities upon the proteins (see biological activities of some analogs on page 61), and therefore the amino acid change at position 218 does not constitute a unifying technical feature for all the different claimed protein variants.

A telephone call was made to Thomas Webster on Sept. 24, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
